

Echoes Implementation Timeline

Campus-first rollout proving how Echoes becomes a living product before expanding.

Seed culture locally, prove retention, then scale

Phase 1 Seed the map

- Pilot one dense campus first.
- Pre-load fragments from ambassadors, clubs, dons, and alumni.
- Start with residences, lecture halls, libraries, food spots, and iconic landmarks.

Phase 2 Trigger creation

- Launch around O-Week, first snowfall, exam season, and Homecoming.
- Use prompts and challenges so posting feels easy, not performative.
- QR codes and landmark drops create strong first-use moments.

Phase 3 Build loops

- Add friend trading, residence communities, club collections, and micro-leaderboards.
- Campus groups compete to unlock and contribute fragments.
- Discovery turns into repeat visits, inside jokes, and shared identity.

Phase 4 Prove + expand

- Validate retention and content density at Western before adding new schools.
- Replicate the same playbook with local ambassadors and localized starter fragments.
- Expand campus by campus, not citywide all at once.

Detailed university marketing tactics

Ambassador seeding

Recruit residence sophs, club execs, orientation leaders, and nostalgic upper years to upload the first wave of fragments before launch so the map never feels empty.

On-campus activation

Place QR posters at high-traffic landmarks, table during club fairs and O-Week, and run scavenger-style memory trails that push users to unlock their first 3 fragments.

Community partnerships

Partner with residences, student government, campus creators, and clubs for themed drops like first-year memories, late-night study spots, funniest ACEB moments, or graduation reflections.

Social launch content

Post short reels showing hidden memories around familiar places. The message is not 'download another app' but 'your campus already has memories everywhere.'

Measurement plan: KPIs + success signals

A/B tests to run early

- Hook: 'Find hidden memories around campus' vs 'Leave your mark on campus.'
- Activation: first-post reward vs first-3-unlocks reward.
- Social proof: friend activity first vs trending fragments first.
- Community join: auto-join residence group vs manual selection.

Core KPIs

- Activation rate
- Week-1 retention
- Fragments per active location
- Average unlocks per user
- % of users who contribute
- Trade rate between friends

Success factors

- App feels alive on day one
- Users return without a push
- People create, not just consume
- Content stays personal and place-based

One-slide takeaway: launch one campus, create density fast, track activation and retention, then replicate the playbook campus by campus.
